計算機概論 HW4

// while(srcrlen++1); THE BUG. What was the problem?

while(sre[++len]); // THE FIX: How does this fix it?

因為 len++是"先做再加"·BUG 版本是先判斷 src[len++] 是否為 1·也就是沒有偵測到\0 時·len 才去+1·但這樣就會產生 len 多加了 1 的問題,所以 FIX 版本就是為了解決這個問題,在 FIX 版本中·len++ 變成了++len 也就是說變成了"先加再做"· len 先+1·再去判斷有沒有\0. 若是有就停止迴圈·如此一來產生的結果便會是正確的值。

正確的輸出如下

```
./strcpy
src address 0x7fff5fbff650 and first char c
dst address 0x7fff5fbff660 and first char H
src array cs23! and last element 0
dst array Hello hello and last element
s2 address 0x7fff5fbff620, its contents is a pointer 0x7fff5fbff650 to first char c
s1 address 0x7fff5fbff628, its contents is a pointer 0x7fff5fbff660 to first char H
dst array cs23! and last element 0
```
